PROJECTS

Academic

Room Rental

- RoomRental, a web-based platform connecting room seekers and sellers to streamline the rental process. The system using Django (Python) for the backend, HTML/CSS/JavaScript with Bootstrap for the frontend, and Postgres for the database. Key features include role-based access (customers, sellers, admin), real-time chat for direct communication, appointment scheduling, and a subscription model for sellers with Khalti payment integration. Customers can search and filter rooms by location, price, and title, while sellers manage listings (CRUD operations) and appointments via a dashboard. The platform includes email verification, secure authentication, and responsive design for mobile and desktop users.
- Using: Django(Python), Html, Css, Js, Bootstrap, Postgres
